Special Use Permit Goals and Regulations

Goals of the Permitting System

- To educate the public regarding all special use permits and when and why they will be required for each specific event.
- To reduce the number of calls associated with hazardous activities that could have been eliminated or reduced in severity.
- To promote general life safety due the potential of a hazardous activity outlined in the special use permit.

Regulations

- Pyrotechnical Special Events (fireworks shows) must have a licensed pyrotechnician in charge of the show. That person shall be on site for all shows and will be responsible for set-up, evaluation of shooting site, actual shooting of show, site examination after the show looking for shells that did not go off, and overall clean-up of shooting site.
- Carnivals and fairs shall submit a site plan showing emergency access for the event, any proposed tents or temporary tents and canopies associated with the carnival and or fair.
- Temporary Tents/Canopies shall show the material in the tent/canopy is fire retardant material. Emergency access has been addressed for emergency vehicles. Weeds and combustible materials are not allowed within the tent and there is a clear space around the perimeter of the tent/canopy.
- Tents can be permitted for extended periods as a semi-permanent site but not to exceed 6 months without re-issuing a new permit.
- Explosives not in use on the site must be kept in an approved magazine.
- Hazardous materials use and storage will be evaluated on a case by case basis depending on the severity of the material(s).
